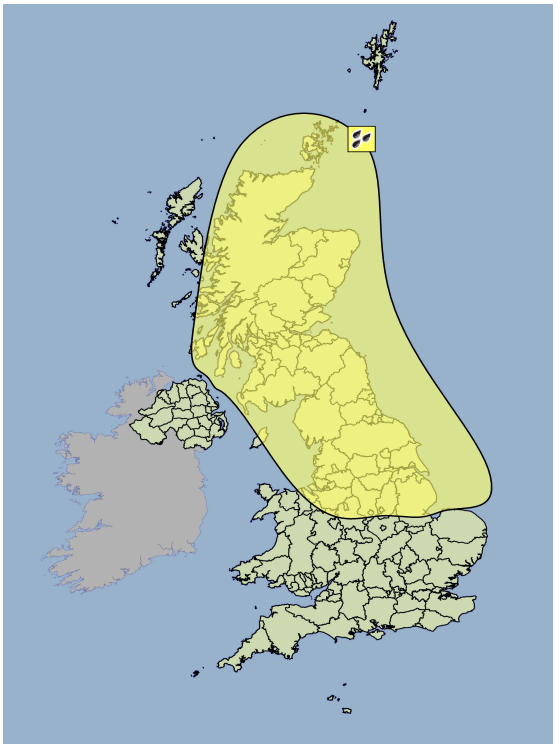
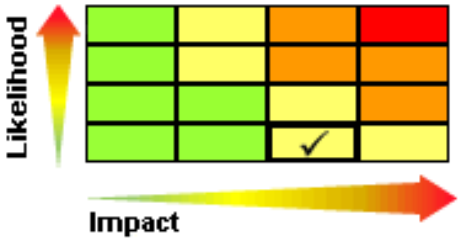
National Severe Weather Warning Service





Chief Forecasters Assessment
A depression, containing some of the warm, moist air derived from the remnants of Hurricane Bertha, continues to move northeastwards across the UK and will become an unseasonably intense feature across the North Sea this evening and overnight.

There is the potential for rainfall totals of more than 50 mm in places and coastal gusts of 50-60 mph, along with large waves.

The rainfall will become increasingly focused across northern England and Scotland overnight.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:15 on Sun, 10th Aug 2014** until **23:45 on Sun, 10th Aug 2014**

Further heavy rain will affect many areas through the rest of Sunday, increasingly affecting eastern Scotland in particular this evening. This will combine with increasing winds across some areas to produce hazardous conditions for outdoor activities. The public should be aware of the potential for some disruption.

This is an update to the warning to remove parts of southern Britain and Northern Ireland where the risk of disruptive rainfall is now reducing.
